

Setting up your Apple iPhone or iPod Touch for UHCL's Wireless Network

This document is intended to be a self-help guide for setting up your Apple iPhone or iPod Touch to connect to the UHCL campus wireless network for internet access. Beyond this document, no further support is available. You must be using firmware version 2.0 or later.

Please note that both devices tend to develop an affinity for a particular access point, and may disconnect as you move about the campus. You may need to follow the steps in this document again if your connection stops working.

1. Touch **Settings** from home screen to enter Settings.

2. Choose **Wi-Fi** option to enter Wi-Fi settings.

3. Choose **Other** to setup UHCL Wireless under Other Network

E-Mail: SupportCenter@uhcl.edu • Phone: 281-283-2828 • Fax: 281-283-2969 • Box: 230 • <http://www.uhcl.edu/UCT>

4. Enter “UHCL-L” into the Name field.

5. Click Security and choose **WPA2 Enterprise** security setting.

6. Enter Username and Password information into the appropriate fields (see below).

7. Touch **Join**. You should now be connected to the UHCL wireless network.

You’ll need to know your UHCL login information, including the domain, your user id, and password. Include the domain in the username field, separated from your UHCL user id by a backslash. The domain for all students is **pclab**, and for all faculty/staff it is **uhcl**.

Example: `pclab\user_id`
